Requirements

“Goose patrol”, Cohort 4, Team 1
Charlotte Holford
Issy Norton
James Tate
Gloria Ademola
Toby Jordan
Peter Barrow
Chun Yin Yip(Sam)
Suat Pembeçiçek

Introduction:

User requirements were gathered through the product brief and directly from the client meeting. We used the product brief to develop questions for the client to help clarify any uncertainties and additional requirements that were not stated. The main aim of the client meeting was to fully understand the user requirements, the main area to focus on was:

1. Attain the SSON (scope summary and objectives note) combining with the product brief.
2. Clarify any uncertainties from the product brief
3. Ask clients opinion on other requirements that had not been stated

To prepare for the client meeting the team brainstormed potential requirements that could be included, allowing everyone to contribute as everyone had different ideas. We felt that the product brief was vague about some of the user requirements and ensured to ask for clarification during the client meeting. An example of this is it was unclear what an “Hidden Event” was in the game so we asked for clarification aligning the teams understanding with the clients expectations.

After the meeting we were able to discuss the answers given making a more detailed plan of how the game would be structured and the elements within it. We identified the SSON to be:

“Build a single player game that allows the player to escape from a gaggle of geese, using inventory items and tactics to disperse the geese”

We have split the requirements into 3 sections, User requirements, Functional requirements and quality requirements. Each requirement section has been written in a table for readability purposes.

- Each table contains a ID and description of the requirements
- The functional and quality requirements state the user requirement ID to identify what they cater towards
- The User requirements table contains a scale to show the importance of implementing it. High - will be implemented. Medium - Recommended but not needed. Low - Only if there is extra time.
- The user requirements are also written without technical language so non technical people like the client will be able to understand it.
- Each functional and quality requirement has a column outlining if it has been implemented or not. This is for clarity within the team to keep track of what has and has not been done. And also for post implementation so anyone needing to maintain the system can see what has and has not been done.

User Requirements

ID	Category	Requirement	Description	Priority	Implemented?
UR01	Avatar	Controls	The game will allow the user to move the avatar left, right, forwards and backwards	High	
UR02	Environment	Display University Map	The game will display to the user a basic university environment with buildings, trees, plants etc.	High	
UR03	Environment	Building Interaction	The game will allow for the user to interact with buildings from the outside, such as hiding from geese or obtaining items, without needing to show the inside of the buildings.	Medium	
UR04	Goose Mechanics	Goose Movement	The game will allow geese to move towards the avatar triggered by the proximity to them.	High	
UR05	Goose Mechanics	Goose Evasion	The game will allow the user to distract and evade geese using non-violent mechanics **UR10**, such as throwing food or hiding within a building. The user must not be able to harm geese.	High	
UR06	Inventory	Item Collection	The game will allow the user to pick up 2 unique items from the map, which will appear in the player's inventory having been picked up. At the start of the game 2 different items will already be in the users inventory.	High	
UR07	Inventory	Item Usage	The game will allow the user to use items in their inventory. The item may affect goose behaviour **UR05** or avatar behaviour **UR08**.	High	

User Requirements

ID	Category	Requirement	Description	Priority	Implemented?
UR08	Avatar	Mechanics	The game will have a set base speed for the player's avatar. This will be variable in case effects are implemented which affect the player.	High	
UR09	Game play	Pausing	The user must be able to pause the game at any point throughout the game.	High	
UR10	Game play	Family friendly	The game must not contain any graphic or violent content to remain family friendly	HIgh	
UR11	Game play	Trackers	The game must contain a tracker that tracks the time, Items used and hidden events encountered	High	
UR12	Events	Hidden events	The game will contain at least 2 hidden events (positive or negative)	High	
UR13	Time	Maximum time limit	The game must not last any longer than 5 minutes	High	

Functional Requirements

ID	Category	User Requirement	Description
FR01	Events	UR12	The game will have one positive and one negative hidden event implemented in assessment 1.
FR02	Time Tracker	UR11, UR13	The game will have an in-game time tracker that counts down from 5 minutes from when the game began.
FR03	Event counter	UR11	The game will contain an in-game counter showing how many hidden events are encountered
FR04	Pause	UR09	The game will have a pause button that can be pressed at any time during game play
FR05	Avatar	UR01	The user will be able to control the movement of the

			avatar using WASD for moving the advatart across the map and the space bar for picking up items
FR06	Inventory Items	UR06	The inventory items will be numbers and the user can press the corresponding number to use the inventory items
FR07	Pausing	UR09	The user can press the Esc button to pause the game
FR08	Environment	UR03	When the user enters the coordinates of a building the avatar should disappear as if they have gone into the building and reappear when they exit

Non Functional Requirements

ID	Category	Requirement	Description	Criteria
NF01	**Game play**	**Collision detection**	The game must prevent the avatar walking through geese and obstacles.	
NF02	**Game engine**	**FPS**	The game will run at a minimum of 30 fps	
NF03	**Game Play**	**Geese movement**	The geese will attack the user avatar once they are within __ proximity. They will move at __ Speed towards the user.	
NF04	**Game play**	**Time**	The game will last no longer than 5 minutes but time will be deducted is contact with the geese is made	
NF05	**Text**	**Legible text**	The game will have clear fonts so that instructions and game context can be easily read.
